SUMMARY

Java Backend / Full Stack Developer with 1+ years of experience building enterprise web applications using Java, Spring Boot, and MySQL. Skilled in designing REST APIs, optimizing SQL queries, and building responsive UIs with React.js. Improved query performance by ~35% through transaction-safe database optimization and delivered 4+ production applications. Hands-on experience deploying Java applications on AWS.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, HTML5, CSS3
- **Backend & Frameworks:** Spring Boot, Spring MVC, J2EE, Node.js (Express.js), RESTful APIs
- **Databases:** MySQL, MongoDB, JDBC, SQL Query Optimization, Transaction Management, CRUD Operations
- **Frontend:** React.js, Bootstrap
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, XAMPP
- **Cloud & Deployment:** AWS (hosting & deployment — hands-on practice with Java application deployment)
- **Concepts & Practices:** MVC Architecture, Monolithic & Microservices concepts, Authentication & Role-Based Access Control (RBAC), Dependency Injection (DI), Inversion of Control (IoC), Clean Code Principles, Agile Development

EXPERIENCE

Software Developer — Suffix E Solutions *Mar 2025 – Present | Kochi, Kerala*

- Designed and developed 4+ enterprise-grade web applications using Java, Spring Boot, MySQL, and REST APIs, delivering modular, scalable solutions for client business workflows
- Optimized complex SQL queries and implemented transaction-safe database operations, improving query performance by ~35% and eliminating data inconsistency issues across 3+ modules
- Architected admin dashboards and backend modules following clean code principles and modular MVC architecture
- Led Git branching strategy and release management for a 3-person team, streamlining deployment pipelines and coordinating release cycles

Software Developer Trainee — Scope India *Sep 2024 – Feb 2025 | Trivandrum, Kerala*

- Developed Java Spring Boot applications with RESTful web services, implementing full CRUD operations and layered architecture
- Applied Dependency Injection (DI) and Inversion of Control (IoC) principles to build loosely coupled, testable backend services
- Built responsive UIs using React.js, achieving consistent cross-device compatibility across 5+ projects
- Delivered 4 enterprise-style mini applications (login systems, blog platforms, task management tools) within 2-week Agile sprint cycles

PROJECTS

AGGE.IN — Dynamic Membership Management System | *Java, Spring Boot, MySQL*

- Built a fully dynamic, membership-based web platform using Java, Spring Boot, and MySQL, enabling non-technical administrators to manage site content without code changes
- Engineered role-based access control (RBAC), user authentication, and tiered membership plans, powering full CRUD operations across Admin and User dashboards
- Delivered CMS-like content management functionality that reduced operational overhead for the client by removing the need for manual content updates

ThinkSynapseCare — Healthcare Appointment Booking System | *Java, Spring Boot, MySQL*

- Developed a multi-role healthcare platform using Java, Spring Boot, and MySQL, with dedicated dashboards for Admins, Doctors, and Patients supporting end-to-end appointment lifecycle management
- Implemented secure session-based authentication and full backend CRUD logic for appointment scheduling and patient record management, ensuring reliable multi-role data access

EDUCATION

Bachelor of Engineering, Computer Science & Engineering — St. Xavier's Catholic College of Engineering Aug 2020 – May 2024
CGPA: 7.89/10 | Tamil Nadu | Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Computer Networks, Operating Systems

Good Shepherd Matric Higher Secondary School — HSC: 76.8% (2019–2020) | SSLC: 92% (2017–2018)
